Drawbacks of the design:

Logo readability issue: The logo text "Sign up" overlaps, making it difficult to read clearly. The mix of bold and normal fonts could also contribute to confusion.

Inconsistent text alignment: The input field labels are left-aligned, but the input boxes appear to have different spacing, making the form look uneven.

Disabled input fields: The "Last name," "Work Email," and "Password" fields appear to be grayed out or disabled, which may cause confusion for users who are trying to fill out the form.

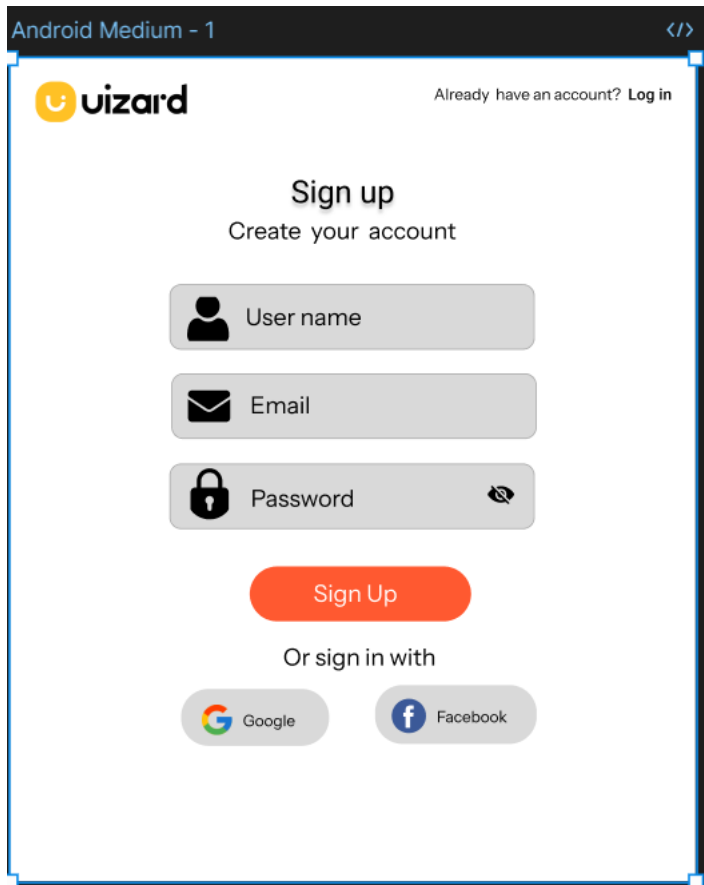

Weak password feedback visibility: The message "Password is too weak" is faint and may not be immediately noticeable to users.

Missing field indicators: Required fields are not marked with an asterisk (*) or any indicator, making it unclear which fields are mandatory.

CTA button usability: The "Create account" button may not be active, and it's unclear when it becomes enabled. If users are not guided properly, they might struggle to complete the process.

Whitespace imbalance: There seems to be excessive whitespace around elements, which could be better optimized to improve visual hierarchy.

Changed user interface Design:

Changes made :

This new design has several improvements over the previous one:

1. Clear Logo Presentation

- The logo is more readable and does not have overlapping text issues like the previous design.

2. Better Field Accessibility

- The username, email, and password fields are clearly enabled, making it obvious that users can enter data.

3. Use of Icons for Inputs

- The input fields have relevant icons (user, email, and lock), which improve visual cues and make the form more intuitive.

4. Password Visibility Toggle

- The password field includes an eye icon for toggling visibility, enhancing user experience.

5. Better Call-to-Action (CTA) Button Design

- The "Sign Up" button is bold, centrally positioned, and in an attention-grabbing color, making it clear where users should proceed.

6. More Balanced Whitespace

- The form elements are spaced better, reducing excessive whitespace while maintaining clarity.

7. Social Login Placement

- The Google and Facebook sign-in buttons are placed right below the primary CTA, making them easy to find.

8. Consistent Alignment and Readability

- The text, input fields, and buttons are well-aligned, making the design look more structured and professional.
